(54) Title: DEVICE USED TO FACILITATE THE INSERTION OF OBJECTS UNDER A FOLDED ROOF IN THE BOOT OF A  
MOTOR VEHICLE

(54) Titre : DISPOSITIF ADAPTE A FACILITER L'INTRODUCTION D'OBJETS SOUS UN TOIT REPLIE DANS UN COFFRE  
DE VEHICULE AUTOMOBILE

(57) Abstract: The invention relates to a device that is used to facilitate the insertion of objects under a folded roof in the boot of a motor vehicle. According to the invention, the roof (1) consists of a rear element (3) which is equipped with a finger bar (11) that is designed to slide along a rail (7) comprising a storage section (12), which is intended to guide the roof (1) between a deployed position and a folded, stored position, and a raised section (17), which is intended to guide said roof between a folded, stored position and a folded, raised position. The inventive device comprises a raising member (16) which moves the above-mentioned finger (11) along the length of the raised section (17). Moreover, a locking member (23) is mounted to the raising member (16) between an unlocked position and a locked position in which it blocks the auxiliary roof element (4, 5) in relation to the rear element (3) when the roof (1) is moved towards the folded, raised position thereof.
